AI PowerEd : Responsible AI in Schools Summit

Pip Cleaves
Chief Learning Architect, Global Village Learning

Pip Cleaves is Chief Learning Architect at Global Village Learning, where she leads bold, human-centred approaches to learning that prioritise agency, creativity and real-world relevance. With experience spanning classroom teaching, school leadership, curriculum design and tertiary education, Pip is known for challenging traditional models and building learning environments that genuinely respond to young people and the world they are entering.

Her leadership is grounded, values-driven and future-focused. Pip works alongside educators to redesign learning in ways that are practical, relational and purposeful, blending progressive learning philosophies with contemporary systems thinking.

Pip's work with artificial intelligence in education is focused on amplification, not replacement. She explores how AI can reduce cognitive and administrative load, deepen learning, and support educators and learners to do more meaningful work, while keeping humanity, ethics and discernment at the centre of decision-making.
